Core Concepts in Acids and Bases

Defining Acids and Bases

In chemistry, acids and bases are defined based on their chemical properties and behaviors. The most common definitions include:

- **Arrhenius Definition:** Acids produce H^+ ions in aqueous solutions; bases produce OH^- ions.
- **Brønsted-Lowry Definition:** Acids are proton donors; bases are proton acceptors.
- **Lewis Definition:** Acids accept electron pairs; bases donate electron pairs.

Properties of Acids and Bases

- **Acids:** Sour taste, corrosive, react with metals to produce hydrogen gas, turn blue litmus paper red.
- **Bases:** Bitter taste, slippery feel, corrosive, turn red litmus paper blue, neutralize acids.

pH Scale and its Significance

The pH scale measures the acidity or alkalinity of a solution, ranging from 0 to 14:

- pH
- pH = 7: Neutral solution
- pH > 7: Basic (alkaline) solution

Understanding pH is crucial for analyzing the strength of acids and bases and their applications in real-world scenarios.
