Understanding the Fundamentals of SAP MM Pricing Procedure

Before diving into configuration, it's crucial to grasp the foundational concepts of SAP MM pricing procedures.

What is a Pricing Procedure?

A Pricing Procedure in SAP MM is a collection of condition types that define how various price components?such as net price, discounts, surcharges, taxes?are calculated and combined to arrive at the final price. It serves as a blueprint that guides SAP during procurement transactions, inventory valuation, and invoice verification.

Key Elements of Pricing Procedure

- Condition Types: Individual elements representing specific pricing components (e.g., gross price, discounts, freight). Each condition type has specific calculation rules.
- Access Sequences: Hierarchies that determine where SAP searches for condition records for each condition type.
- Condition Tables: Data repositories that store condition records, such as specific discounts or surcharges.
- Pricing Procedure: The sequence in which condition types are processed, including their grouping, calculation logic, and whether they are mandatory or optional.
- Assignment to Document Types: Linking the pricing procedure to specific purchase document types (e.g., purchase order, contract).

Why is Correct Configuration Critical?

- Ensures accurate procurement costs and inventory valuation.
- Supports compliance with tax regulations.
- Provides transparency and audit trail in pricing.
- Facilitates flexible and dynamic pricing strategies.

Steps for Configuring MM Pricing Procedure in SAP

Configuring the MM pricing procedure involves several systematic steps. Each step requires careful planning to meet specific business needs.

- Define Condition Types

Condition types are the building blocks of your pricing procedure.

Key considerations:

- Identify all relevant pricing elements (gross price, discounts, freight, taxes).
- Create condition types for each component if they don't exist.
- Classify condition types as manual or automatic, and as mandatory or optional.

Example:

- PR00 (Net Price)
- K004 (Material Discount)
- KF00 (Freight)
- MWST (Tax)

Implementation:

- Use transaction code OVKK or navigate via SPRO to define condition types.
- Assign properties such as calculation type, pricing type, and whether the condition is statistical.

- Define Access Sequences

Access sequences control how SAP searches for condition records.

Steps:

- Use transaction V/06 or SPRO path: SPRO ? Materials Management ? Purchasing ? Conditions ? Define Access Sequences.
- Assign condition tables in hierarchical order, from the most specific to the most general.
- Consider relevant fields such as material, vendor, plant, and purchase organization.

Best practices:

- Use specific access sequences for critical pricing elements.
- Keep access sequences optimized to reduce search times.

- Create Condition Tables and Condition Records

Condition tables define the key fields for storing condition records.

Procedure:

- Use transaction V/03 or SPRO path: Conditions ? Define Condition Tables.
- Select or create tables based on key combinations (e.g., material + vendor).
- Maintain condition records via transaction VK11 (create), VK12 (change), or VK13 (display).

Tip:

- Regularly review and update condition records to reflect current pricing agreements.
- Set Up the Pricing Procedure

This step involves creating and configuring the overall pricing procedure.

Steps:

- Use transaction V/08 or navigate via SPRO: Materials Management ? Purchasing ? Conditions ? Define Pricing Procedures.
- Create a new pricing procedure or modify an existing one.
- Assign condition types to the procedure in a specific sequence, considering calculation logic and dependencies.

Configuration details:

- Assign a Condition Category (e.g., gross price, discounts).
- Define whether each condition type is mandatory, optional, or statistical.
- Specify the calculation type (percentage, amount, fixed value).
- Set the grouping for cumulative or sequential calculation.

- Assign Access Sequences to Condition Types

Link each condition type to its appropriate access sequence to ensure SAP retrieves the correct data.

Procedure:

- Edit the condition type in the configuration.
- Assign the relevant access sequence.
- Save your entries.

- Assign the Pricing Procedure to Purchase Document Types

Final step in setup involves linking your pricing procedure to specific document types.

Steps:

- Use transaction OMPP or SPRO: Materials Management ? Purchasing ? Purchase Order ?

Define Number Ranges and Document Types.

- Assign your newly created pricing procedure to the relevant document types (e.g., standard purchase order).

Practical Considerations and Best Practices

While the above steps provide a technical roadmap, practical experience emphasizes certain best practices.

Modular and Reusable Design

- Create generic condition types applicable across multiple scenarios.
- Design pricing procedures that can be reused or adapted with minimal changes.
